

# CS 7641 Machine Learning

## Assignment 3

Philip Bale  
pbale3

Due Sunday April 1st, 2018 11:59pm

### Introduction

This assignment explores unsupervised learning and dimensionality reduction. It begins by examining clustering algorithms, specifically k-means and expectation maximization. It then proceeds to cover four dimensionality reduction algorithms: principal components analysis, individual components analysis, randomized projections, and random forests. After running these six algorithms on the original datasets and observing the results, the results are then piped into a neural network learner for further examination.

### Datasets chosen

The datasets chosen were the same datasets chosen for assignment 1. The first dataset is the US permanent visa dataset. This dataset is interesting due to its potential to aid in the visa application process from a cost and time savings potential. It could also enable confidence in those interested in applying for a US permanent visa but doubting their chances of acceptance. At the end of the day, the goal is it to try to determine the application result before time, money, and other resources are spent.

The second dataset is a home sale price prediction dataset taken from an ongoing Kaggle competition. This dataset is interesting for two primary reasons: real-world applicability and participating in a Kaggle challenge. First, modeling home prices is both a difficult and lucrative task. If one can successfully model home sale prices on large sets of data, he/she can make large amounts of money investing in real estate when he/she detects outliers in listed price vs. what it is expected to sell for. This applies to flipping, investing, and remodeling. Second, the dataset is part of an ongoing Kaggle competition that does not have a winning solution yet. By taking part of the competition, the dataset presents the opportunity to work towards a winning solution and advance ones algorithms over time.

## Part 1: Clustering Algorithms

### Introduction

Text

#### 1) k-means clustering

##### Overview

Text

Text

#### 2) Expectation Maximization

##### Overview

Text

## Part 2: Dimensionality Reduction Algorithms

### Introduction

Text

## 1) Principal Components Analysis (PCA)

### Overview

Text

### Analysis

IText

## 2) Independent Components Analysis (ICA)

### Overview

Text

### Analysis

IText

## 3) Randomized Projections

### Overview

Text

### Analysis
